

## Lake Diditchie

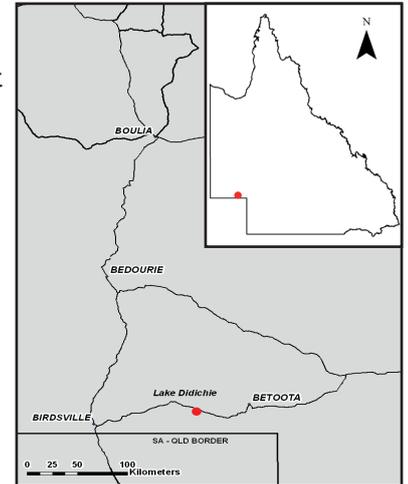

Queensland  
Wetlands Program

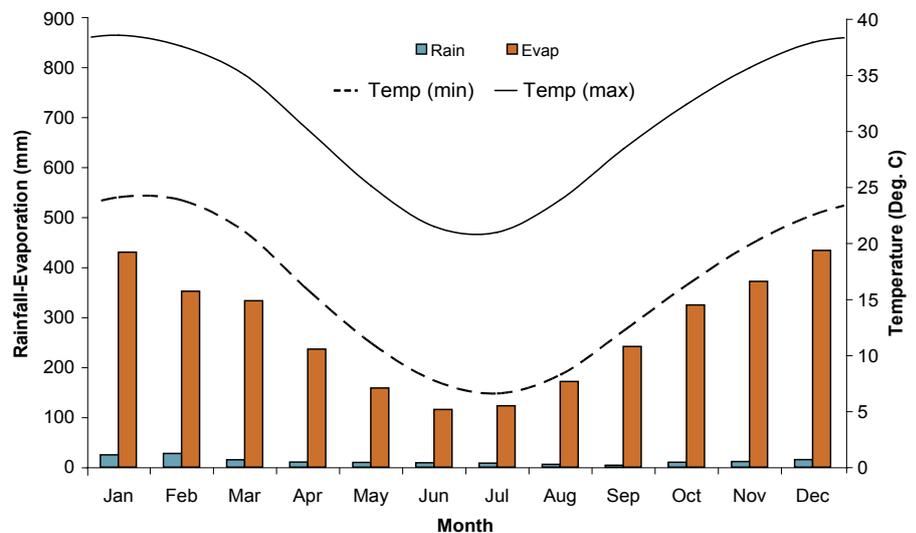

### Study Area

Lake Diditchie is located approximately 100 km east of Birdsville along the Birdsville Developmental Road, South-West Queensland.

This study area is an example of an arid floodplain lake in the Channel Country Bioregion.

### Climate<sup>1</sup>

The study area is situated within an arid climatic region with no distinct wet and dry season. Evaporation exceeds rainfall in every month. The average annual rainfall for the area is 149 mm.

|                                |   |
|--------------------------------|---|
| <b>Landform and Inundation</b> | Claypans, salt pans and lake floors subject to seasonal flooding<br>Periodic freshwater inundation from overland flow |
| <b>Soils<sup>2</sup></b>       | Hydrosols   |
| <b>Vegetation<sup>3</sup></b>  | Sparse herbland on floodplain lakes (RE 5.3.22)   |
| <b>Geology<sup>4</sup></b>     | Clay silt and gravel  |
| <b>Disturbance</b>             | No effective disturbance except grazing by hoofed animals   |

## Soil Indicators Present (within 0.3 m of surface)

| Indicator <sup>5</sup>                     | Site 179                                      | Site 180  |
|--|---|---|
| Organic materials and organic carbon (OC)* | No organic materials<br>OC: 0.14%             | No organic materials<br>OC: 0.07%   |
| Matrix colour                              | Brown   | Light brownish grey   |
| Chroma (thickness of layer)**              | Not present                                   | Not present   |
| Mottles and Segregations                   | Common 15-30 mm distinct grey mottles         | Very few 5-15 mm faint dark mottles<br>Few <2 mm calcareous soft segregations |
| Depth to groundwater                       | Not present                                   | Not present   |
| Ferruginous root channel and pore linings  | Not present                                   | Not present   |
| pH* <sup>6</sup>                           | Moderately alkaline                           | Strongly alkaline   |
| Texture                                    | Fine sandy clay loam to fine sandy light clay | Fine sandy light medium clay to light medium clay                             |
| Acid sulfate material                      | Not present                                   | Not present   |
| Electrical Conductivity (EC) <sup>6</sup>  | Non saline                                    | Non saline  |

\*Organic carbon % (Dumas method) and pH taken from surface (0-0.1 m)

\*\*Chroma value is less than or equal to 2

## Summary of Field Observations

- *Muehlenbeckia florulenta* indicative of a periodically inundated environment
- Mottling suggests water fluctuation throughout both soil profiles however higher chroma values and brighter soil colours indicate that area may not experience reducing conditions
